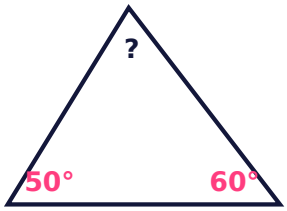
GEOMETRY QUEST · WORLD 5

Triangles

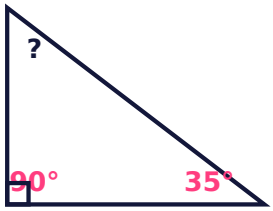
ANSWER SHEET · for the grown-up

Answers are shown in green. “Check” means look at the child’s drawing or measuring: allow ±2° or ±2 mm.

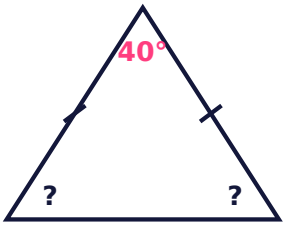
1 Find the missing angle in each triangle. (Not drawn to scale.)



70°



55°



70 each°

2 Classify each triangle by its sides (equilateral, isosceles, scalene) and its angles (acute, right, obtuse).

sides 5, 5, 5 cm	**equilateral, acute**
angles 90°, 45°, 45°	**isosceles, right**
angles 120°, 40°, 20°	**scalene, obtuse**

3 Area of a triangle = ½ × base × height. Work these out.

base 8 cm, height 5 cm	base 12 cm, height 7 cm	base 9 cm, height 4 cm
20 cm²	**42** cm²	**18** cm²

4 An equilateral triangle has sides of 7 cm. What is its perimeter?

21 cm

5 Experiment: draw any big triangle. Measure its three angles with a protractor and add them up. What do you get?

About 180° (within a few degrees because of measuring).
